

JSEcoin is a consumer focused web platform built on top of our browser mined blockchain

How It Works

1. A webmaster sets up the JSEcoin code snippet on his website at example.com
2. Sally sends Bob a cryptocurrency transfer on the JSEcoin platform
3. Visitors to example.com start hashing/mining the block data with Sally's transfer
4. The website owner is rewarded for helping secure the blockchain
5. The block containing the transaction is hashed and published to the public blockchain

Environment

Traditional cryptocurrencies consume huge amounts of power, the bitcoin network alone consumes more electrical power than the country of Cuba. JSEcoin is mined using background resources within a web browser tab. The CPU usage for our hashing algorithm is less resource demanding than the loading of a video advertisement. By using surplus CPU availability within the browser we can efficiently hash data at scale to secure the JSE blockchain.

Investors

ICO will be taking place in 2018 to raise funds required to build the governing company and market to new users.

Get whitelisted here: <https://jsecoin.com/whitelisting>

Investments over \$10,000 require KYC compliance.

Exchange listing will take place after the ICO, at this time investors will be able to trade their JSE tokens at open market value on 3rd party exchanges.

Key Facts

- Live platform since August 2017
- Website mining consumes less resources than a video advertisement
- Platform provides fee-free fast transfers with 30 second block cycles
- As of January 2018 we have more than 14,000 websites setup with around 20 million mining impressions each day.
- ICO & Exchange Listing: TBA. 2018

Webmasters

The code snippet is copied and pasted from the platform on to a publishers website. A opt in notification is displayed to provide transparency with the website visitor. **Our system does not do any hidden background mining.**

Website visitors then carry out the hashing required to secure the blockchain.

Merchant tools and affiliate links are also available via the platform.
